

Clear and Clear Reverse Vinyl Graphics Installation Guide

Please read and understand these instructions before attempting to apply your vinyl. Take your time to get the positioning right and level. If in doubt, please call us.

Wet Mount instructions

Note: You will find TWO separate pieces in your install kit,

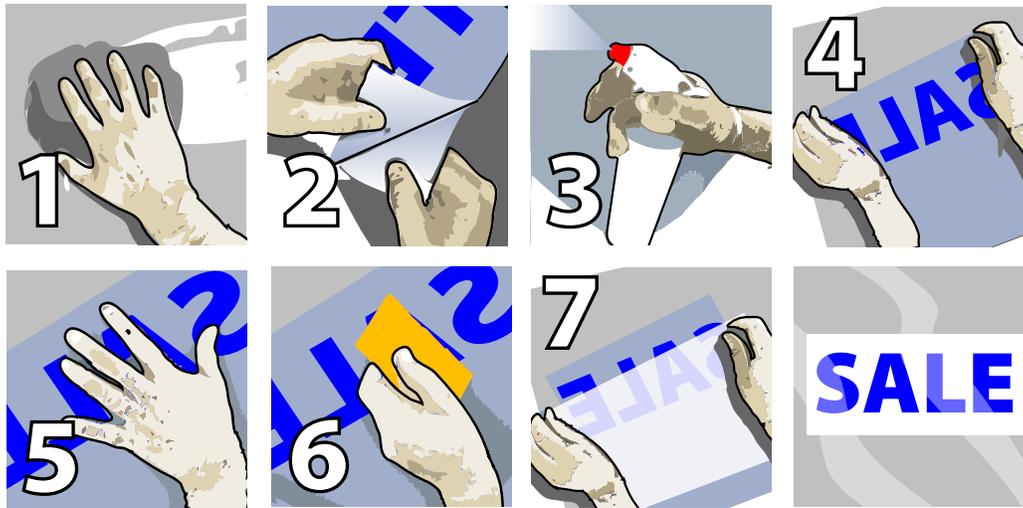

1. The sign printed on clear vinyl

2. White Vinyl backing

Once you install the clear sign, the white back will enable customers to see the transparent image. The backing is slightly larger than the sign. This is to help you install. Once in place any excess can be trimmed off.

You will need the following equipment:

- paper towels (to dry the surface)
- squirt bottle (filled with water and a few drops of dish soap or hand soap (NOT Windex or any ammonia/chemical based cleaner)
- squeegee/credit card (to remove air bubbles)
- a scraper (to remove dirt/dust from surface)

Remember, you will likely be working on the inside of the glass with the image printed in reverse.

1. Wash area and remove all wax, grease and dirt from the area the sign will be placed. Measure the area carefully to ensure the graphic will fit in the right position.
2. Peel off the white backing of the sign.
3. Wet sticky side of sign (this prevents sign from sticking until you have it in the right position)
4. Lay the wet vinyl (sticky side) against the surface in approximately the right position moving from the top to the bottom.
5. The vinyl should be against the surface now sliding on a film of water. You can now slide the vinyl into the exact position (take care that it is square before the next step).
6. Squeegee the vinyl from center out to the edge (this removes the excess film of water and makes the vinyl stick).
7. Repeat steps 2-7 with the white adhesive backing taking care not to shift or wrinkle either the sign or the backing. If possible let the sign stand for 24 hours to allow it to set.

Cleaning

Clean the vinyl lightly using water and a mild detergent or hand soap. Do not rub or abrade the image, or use any solvent based chemicals.

Dry carefully with a soft cloth or towel. Although you may have chosen lamination to protect your sign, this is only for weather and light abrasion. Chemicals, scratches or heavy rubbing will damage even lamination. CAUTION! Do not use Windex or any chemical/ammonia based cleaner to clean your signage.
